

CareerLens: Evidence Confidence Score Report

Complete Feature Implementation & Testing Summary

FEATURE
COMPLETED

Core Principle: "Don't just tell us what skills the candidate claims. Show us what skills the candidate can actually prove."

Feature: Evidence Confidence Score & Verification Engine **Date:** 07 October 2026

Frontend URL: <http://localhost:3000/evidence>

Backend API: <http://127.0.0.1:8000/evidence/>

1. Executive Summary (Kaam Ka Nichod)

CareerLens project ke andar **Evidence Confidence Score** feature successfully implement aur test kar diya gaya hai. Ab resume me likhi kisi bhi skill ko andhadhundh maanne ke bajaye, system actual proof (GitHub commits, repositories, code depth, projects, documentation) ke basis par deterministic 0–100 score aur explainable breakdown generate karta hai.

2. Skill Evidence Score Ranges & Formula

Score Range	Status Label	Meaning & Proof Level	Example Skill
81 – 100	Strong Evidence	Multiple independent repos, tests, CI, high recency	Java (91/100), React (84/100)
61 – 80	Moderate Evidence	Active code & queries; needs test or deployment depth	SQL (78/100), Python (67/100)
31 – 60	Limited Evidence	Single file or template; preliminary signals only	Docker (38/100)
0 – 30	Weak / Unverified	Claimed on resume but zero detectable code evidence	AWS (18/100)

3. Point Contribution Breakdown (+100 Max)

Resume Claim (+10 max)

Skill resume me explicitly detect hone par points milte hain. Unclaimed hone par 0.

Project Evidence (+25 max)

3+ projects = +25, 2 projects = +18, 1 project = +12. Unavailable hone par 0.

Code Implementation (+25 max)

AST depth, automated tests, module structure ke hisaab se points milte hain.

GitHub Activity (+15 max)

50+ skill commits = +15, 10-50 commits = +10. Account not connected par 'Unavailable'.

Project Relevance (+10 max)

Domain alignment aur enterprise / production patterns ke basis par score.

Recency & Docs (+15 max)

Last 30 din ki activity (+10) aur README / portfolio documentation (+5).

4. Claim vs Evidence Comparison & Contradiction Detection

- **Under-Supported Claims (Neutral Flag):** Agar candidate resume me 'Expert' claim kare lekin code evidence minimal ho (e.g. AWS 18%), system bina accusation ke neutral recommendation deta hai: *"Claim appears under-supported. Recommendation: Add a demonstrable AWS project or reduce proficiency claim."*
- **Unlisted / Stronger Skills:** Agar candidate ne 'Beginner' likha hai ya resume me nahi likha lekin repos me 5+ active projects hain, system suggest karta hai: *"Evidence suggests stronger proficiency than stated."*
- **Fair Missing Data Handling:** 'No evidence found', 'Evidence unavailable' (GitHub not connected) aur 'Contradictory evidence' ko alag-alag treat kiya jata hai.

5. New Files & Implementation Overview

- **Frontend Page:** frontend/src/app/evidence/page.tsx (Dedicated /evidence route)
- **Frontend View & Modal:** EvidenceVerificationView.tsx, SkillDetailModal.tsx, EvidenceDashboardWidget.tsx
- **API Layer & Types:** evidenceApi.ts, evidence.ts
- **Backend Scorer:** backend/app/services/scoring/evidence_confidence.py
- **Backend Route:** backend/app/api/routes/evidence.py registered in app/main.py
- **Live Verification:** Frontend dev server (Port 3000) aur Backend server (Port 8000) dono live hain aur production build pass ho chuka hai!
